

Go to the SyntEvo [SmartGit](http://www.syntevo.com/smartgithg/index.html) site. And click the green “download” button.

Open up the .dmg file in your Downloads folder. Move the SmartGitHG application into your Applications folder. Then, open the SmartGitHG application. You will get a dialogue box like the one pictured below:

Steps

- > License Agreement
- Type of Usage
- Git & Hg Executables
- SSH Client
- User Information
- Hosting Providers
- Support

License Agreement

Welcome to SmartGit/Hg! Please read the following license agreement carefully. You need to accept it to continue.

License Agreement for SmartGit/Hg

Last date of change: 2013-04-24

1 Subject of the Contract: The license terms of syntevo GmbH (hereinafter called "licensor") are applied for the concession of the rights of use for the entire or partly use of the object code of the software SmartGit/Hg (hereinafter called "SOFTWARE") to contractors, juristic persons under public law or official fund assets in terms of §310 in conjunction with §14 BGB [Civil Code] (hereinafter called "licensee"). Herewith the inclusion of the licensee's own terms and conditions is

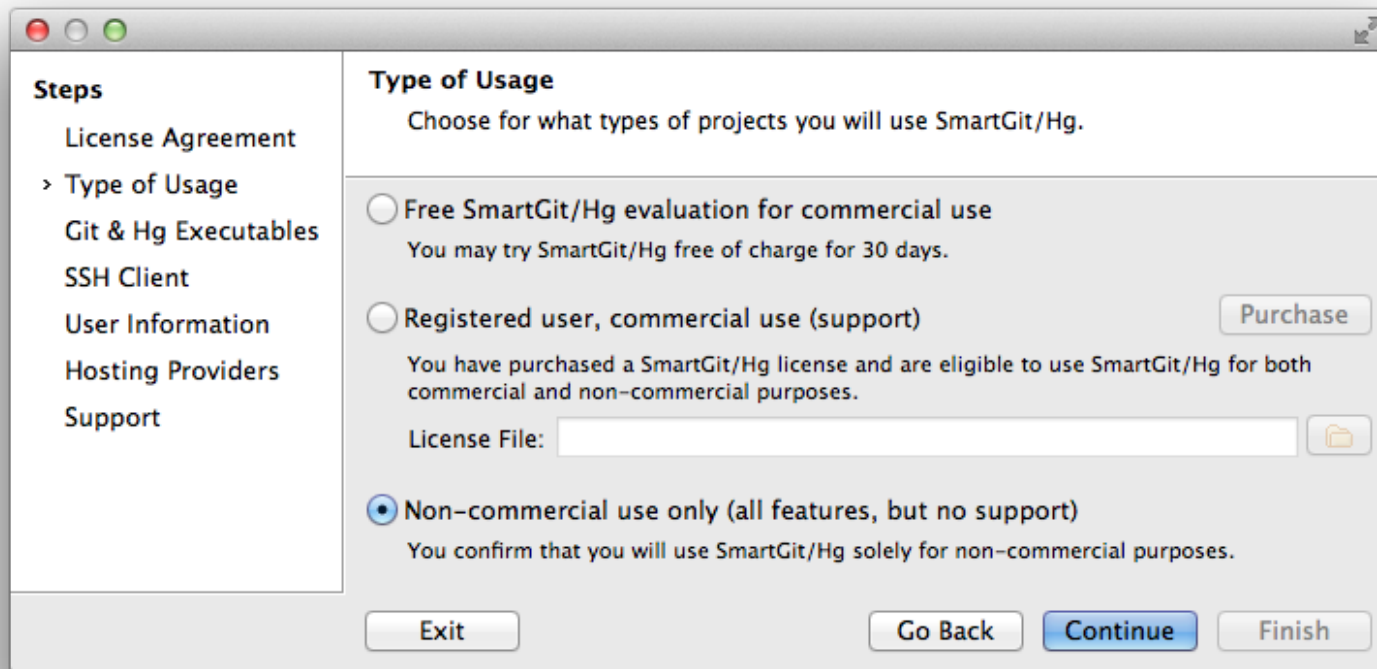

☒ I understand and agree to all terms and conditions of this agreement

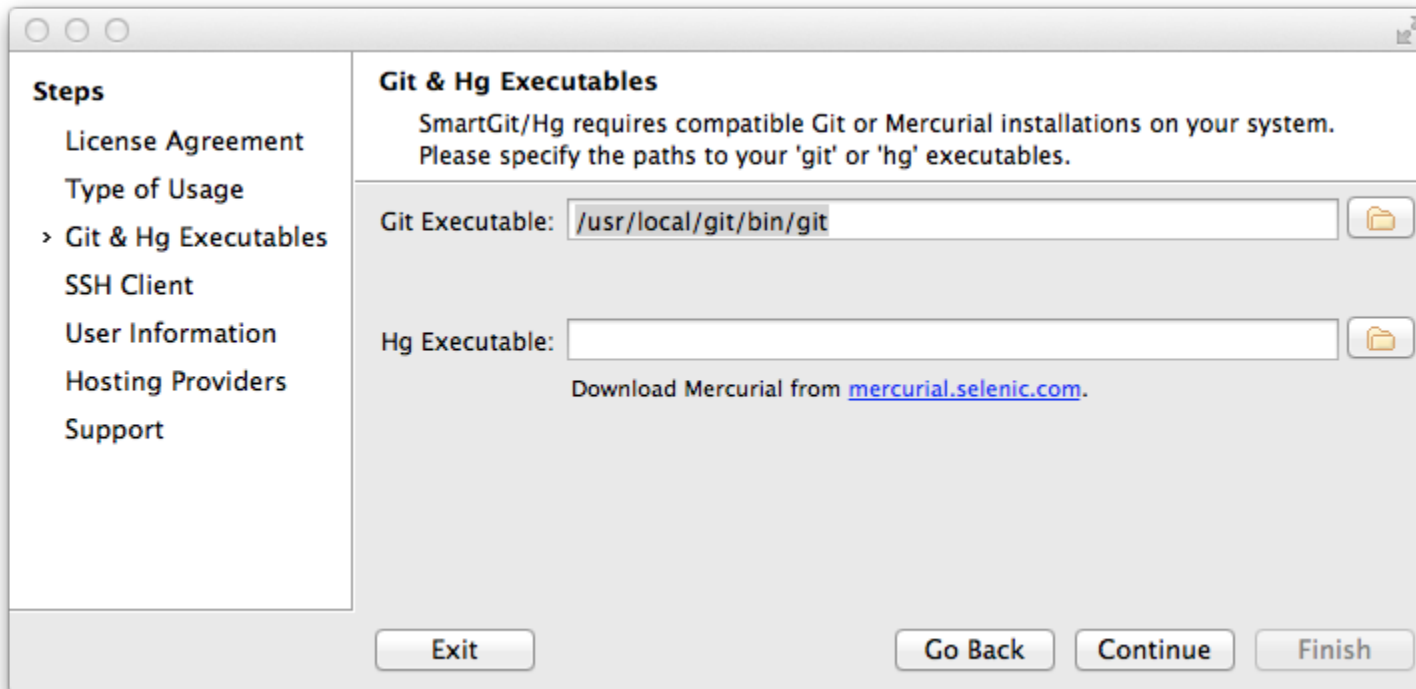

Exit

Go Back

Continue

Finish

A screenshot of a macOS-style window titled "SmartGit/Hg Executables". The window has a sidebar on the left with a "Steps" section containing a list of installation steps. The main area is titled "Git & Hg Executables" and contains instructions, input fields for Git and Hg executables, and a link to download Mercurial. At the bottom are four buttons: "Exit", "Go Back", "Continue", and "Finish".

Steps

- License Agreement
- Type of Usage
- > Git & Hg Executables
- SSH Client

Git & Hg Executables

SmartGit/Hg requires compatible Git or Mercurial installations on your system.
Please specify the paths to your 'git' or 'hg' executables.

Git Executable: 

Hg Executable: 

Download Mercurial from mercurial.selenic.com.

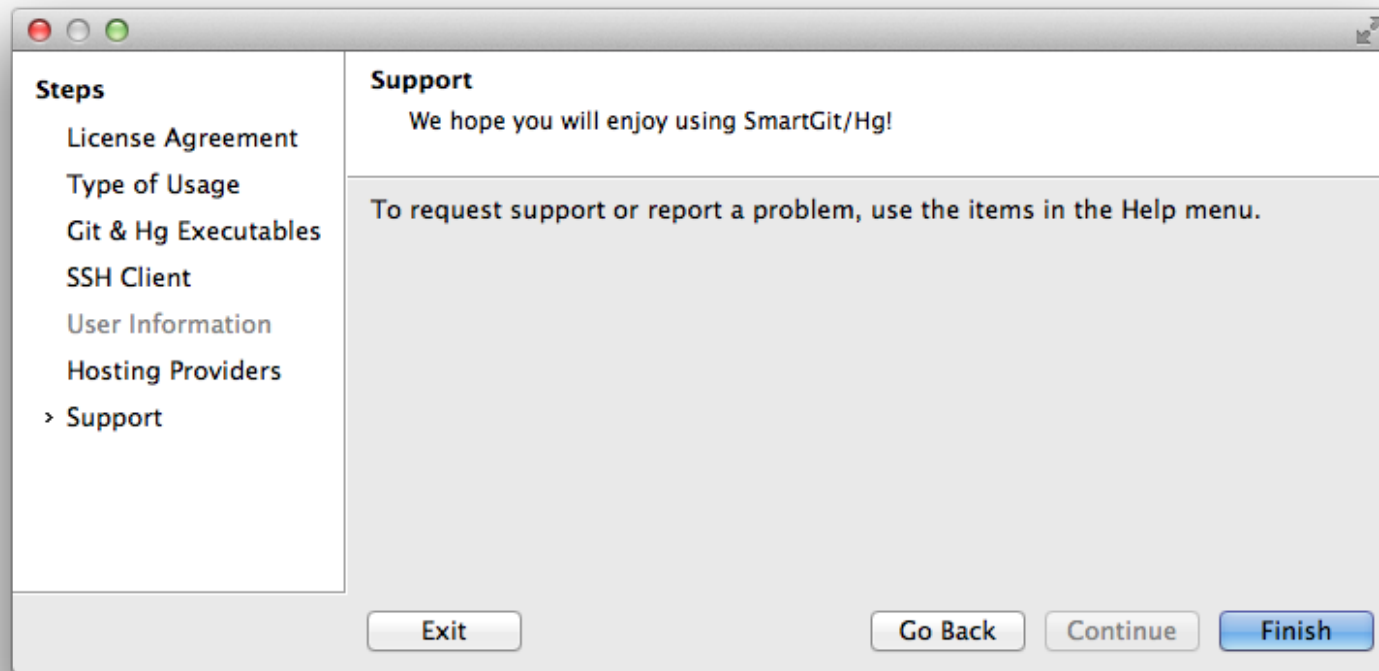

The image shows a MacOS-style window with a title bar containing red, yellow, and green window control buttons. The window is divided into two main sections. On the left is a sidebar titled "Steps" which lists several options: "License Agreement", "Type of Usage", "Git & Hg Executables", "SSH Client", "User Information", "> Hosting Providers" (which is selected and has a small arrow icon to its left), and "Support". The main content area on the right is titled "Hosting Providers" and contains the following elements:

- A paragraph: "If you are using a hosting provider, you can provide account details here to simplify working with your hosted projects."
- Two radio button options:
 - ☐ I don't use a hosting provider
 - ☒ My main hosting provider is
- A dropdown menu next to the selected radio button, currently showing "GitHub".
- A text input field labeled "User Name:" containing the text "wpfstudent".
- A password input field labeled "Password:" containing seven dots. This field has a blue border.
- A line of text below the password field: "Use the same login information as for the github website."
- A blue hyperlink labeled "Create Account".

At the bottom of the window, there are four buttons: "Exit", "Go Back", "Continue" (which is highlighted with a blue border), and "Finish".

Now, keep SmartGit open. We need to get a piece of information from GitHub.com in order to finish setting up.

Open a browser and go to github.com. Log in to your account.

Go to your repository for the class. (pictured below)

Make sure HTTP link is selected.

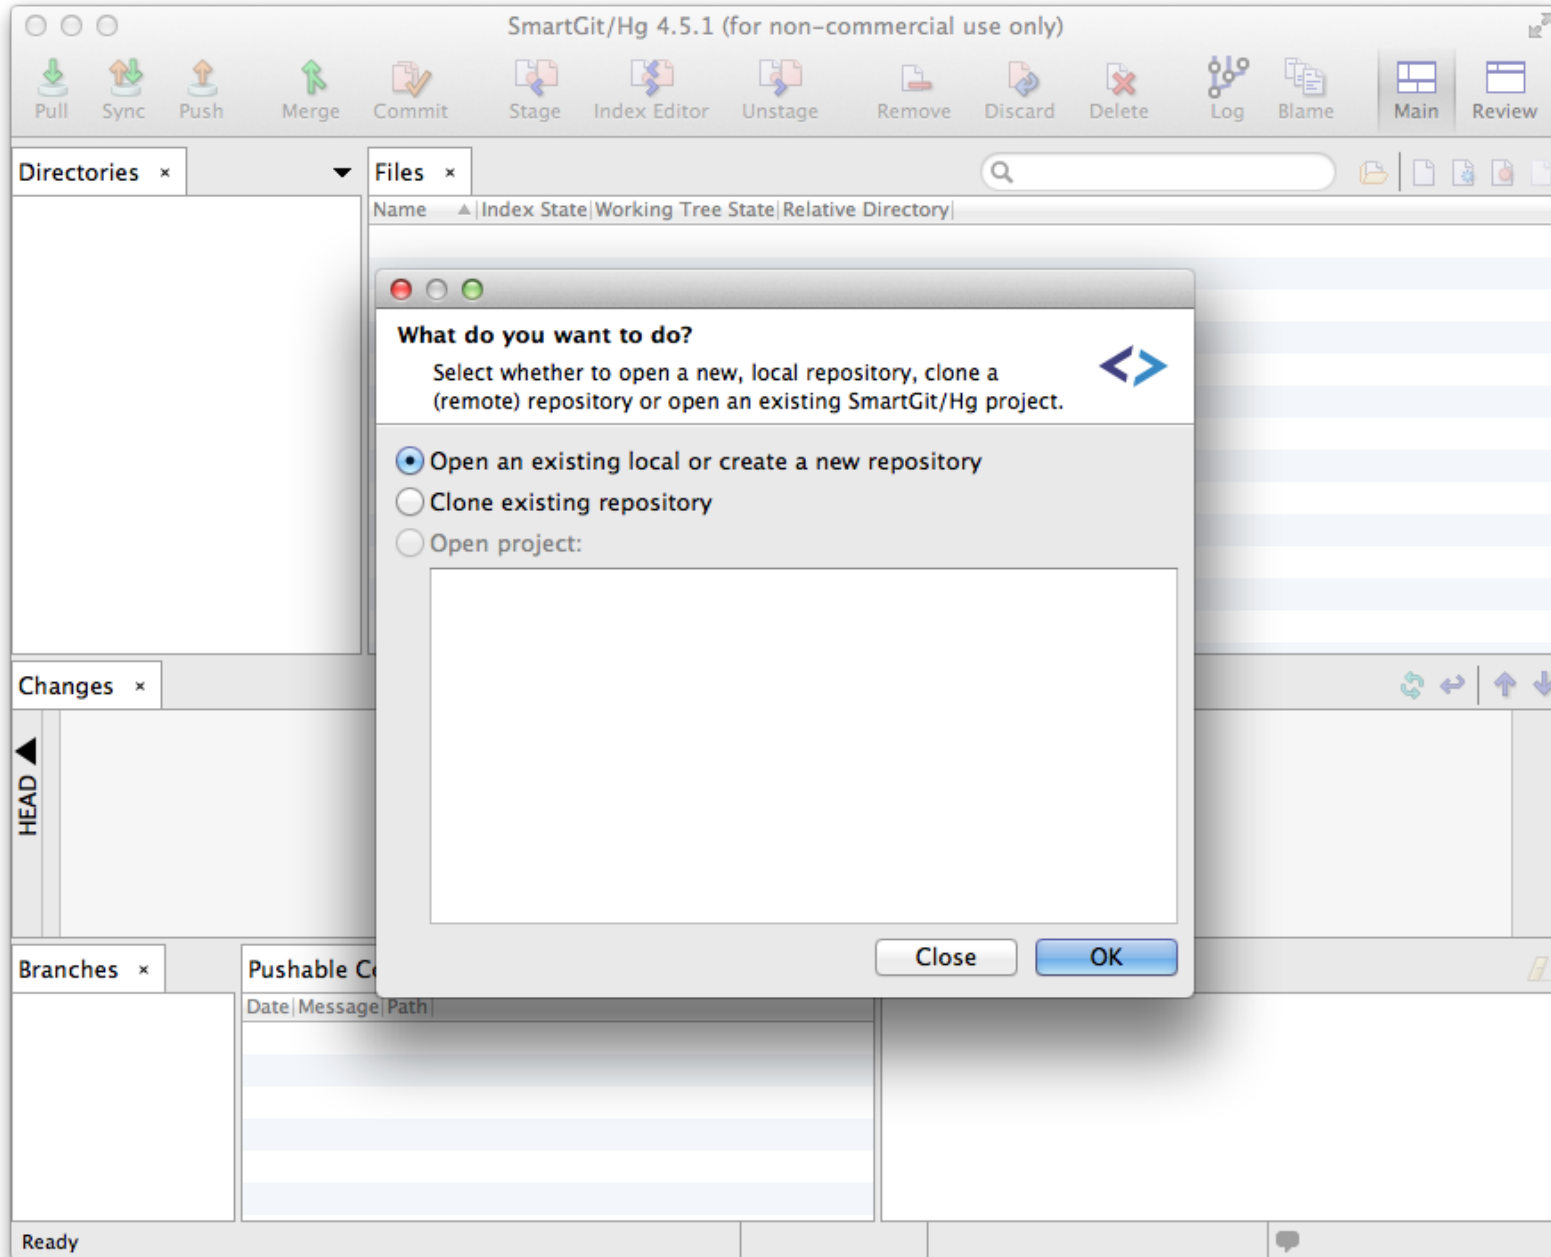

Then select the link in the field (highlighted below) and copy it to your clipboard (⌘C)

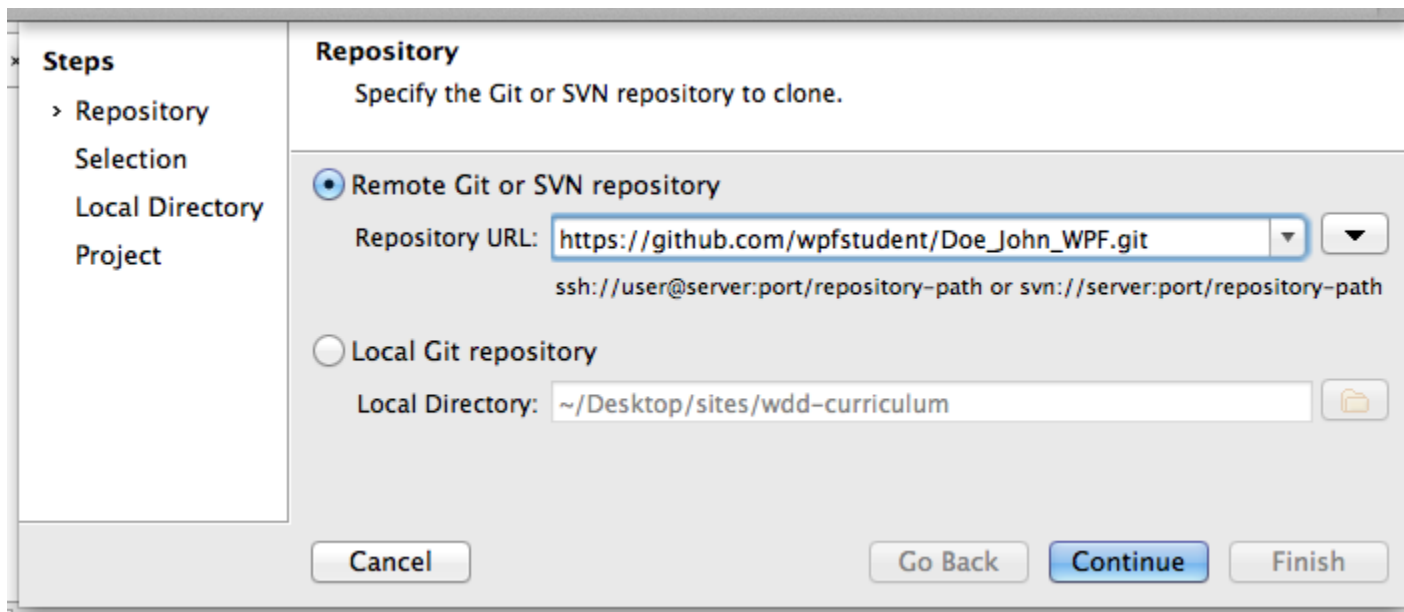

Now that we have the link to your repository on GitHub we are going to need to tie that into SmartGit.

Back to SmartGit. You should see the following. (If you don't you can go to the "Project" menu at the top of the screen. Select "Clone" from the menu.)

Select “clone existing repository” and click OK. We are doing this because we need to tie into the repository we set up on GitHub.com.

Remember that link we copied from a few earlier steps? That is your Repository URL. Go ahead and paste it in the “Repository URL” (you can paste by typing V on your keyboard) field in this new dialogue box and click “Continue.”

Steps

- > Repository
- Selection
- Local Directory
- Project

Repository
Specify the Git or SVN repository to clone.

☒ Remote Git or SVN repository

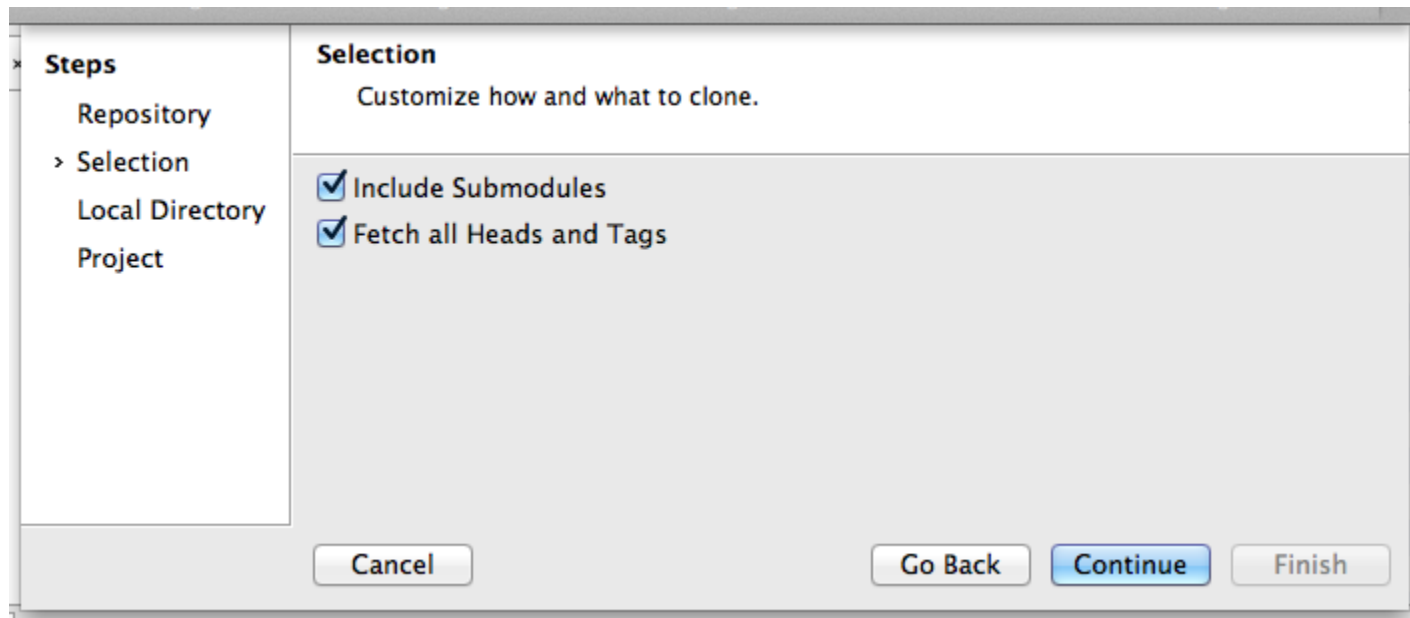

Repository URL: ▼

ssh://user@server:port/repository-path or svn://server:port/repository-path

☐ Local Git repository

Local Directory: 

Cancel Go Back Continue Finish

Next, is the Local Directory dialogue box. You need to pick the location on your computer to store the files you will work on in this class. This is the folder where you will store all your files for this class. Where you want to put your class work on your computer is entirely up to you. **But do not move the folder** after you set it up. (Doing so would confuse SmartGit).

For this example I clicked “browse” and then went to the Documents folder and then created a folder for this class titled “WPF Repository.” If you wanted to store your work in a folder named “WPF class work” on your desktop you would create the folder then browse to it or type “~/Desktop/WPF class work” in the field. Once you have created and selected your folder, click “Continue.”

Steps

Repository Selection

> Local Directory Project

Local Directory

Specify the local directory for the new repository.

Path:

Cancel

Go Back

Continue

Finish

Steps

- Repository
- Selection
- Local Directory
- > Project

Project

Specify where to open the newly cloned repository.

☒ Open in new project

Project Name:

☐ Open in current project

Cancel Go Back Continue Finish

You may see a message in the bottom right that looks like this:

- ▼ ⚠ Clone
 - Cloning into '/Users/rcarroll/Documents/WPF Repository'...
 - ⚠ You appear to have cloned an empty repository.
